

OutSystems® Platform

High-productivity platform as a service (PaaS) Cloud. On-Premises. Hybrid.

The OutSystems® Platform makes it exceedingly easy for IT organizations to build, deploy and manage complex and scalable enterprise web and mobile applications. OutSystems Platform is the only application platform as a service (PaaS) available as a cloud, on-premises or hybrid solution that generates standard Java and .NET applications with fully automated DevOps support. The OutSystems Platform enables enterprise development teams to deliver faster release cycles and realize a quicker and larger return on investment without the proprietary restrictions of other systems.

The OutSystems Platform is portable and open, eliminating any risk of cloud lock-in.

Public Cloud - The OutSystems Platform is available as a public cloud service, providing enterprise-class cloud computing power.

- Running over the Amazon Web Services (AWS) IaaS
- 99.9% availability or more depending on HA configuration
- Self-service provisioning, elastic scaling, configuration, monitoring
- VPN to your datacenter for easy and secure integration to existing systems
- Daily backups and on demand restore of production data
- Continuous infrastructure monitoring
- Access to Cloud AppDev specialists to accelerate you on every step
- Full cloud or hybrid configurations - e.g. Dev & Test in the cloud, deploy production on-premises... or vice-versa

Private Cloud - The OutSystems Platform can reside in a private cloud provisioned by a third-party service provider or in a private cloud within the customer's data center.

On-Premises - Customers have the option to run the OutSystems Platform as an on-premises solution.

KEY BENEFITS

- High-productivity application development
- Cloud, on-premises or hybrid development and deployment
- Standard, extensible Java and .NET code generation
- Automated DevOps: one-click deploy, integrity checking, self-healing, staging, rollback

WHAT CUSTOMERS ARE SAYING

"We have delivered highly complex and scalable enterprise web and mobile applications faster than we ever thought possible. The OutSystems Platform as a service (PaaS) offering will be an amazingly powerful solution for companies that need to deploy and maintain enterprise-class applications more effectively. And the ability to bring the Platform back on-premises, or deploy a hybrid approach avoids the cloud lock-in."

*Rogério Campos Henriques
CIO, Fidelidade.*

"The OutSystems Platform makes it extremely easy for us to deliver high-quality web and mobile applications, and to respond quickly to ever-changing business requirements. The OutSystems Platform as a platform as a service (PaaS) is a very compelling solution for companies who want to build and deploy applications quickly in the cloud, making it even easier for IT to deliver innovative business solutions.."

Bill Yates, VP of IT, Medivation.

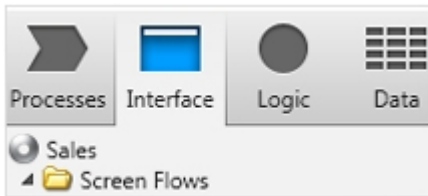

Hybrid - Customers can build and test in the public cloud then deploy in a private cloud or in an on-premises environment - or any combination desired. Application components can be designed and deployed across public, private or on-premises environments, leveraging the unique benefits of each based on the functional requirements of the application.

Rapid App Delivery and Management in the cloud

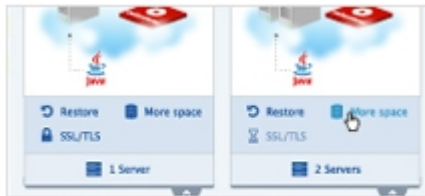

The OutSystems Platform enables developers to deliver complex enterprise web and mobile applications, through an intuitive and easy to use set of tools. Integration with internal or third party systems is simplified. Real-time performance monitoring of production applications ensure an outstanding user experience.

Some of the key capabilities included in the OutSystems Platform:

High-productivity development for web and mobile applications - modern, highly usable user interfaces, data and workflows

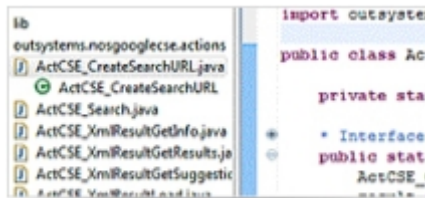

Complete control over your applications, environments and optional PaaS services

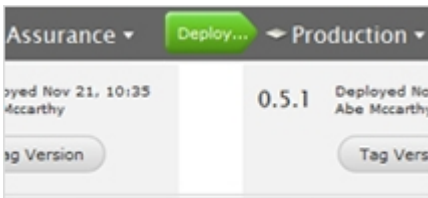

Simple and robust integration with on-premises and SaaS applications - packaged or custom, systems or data

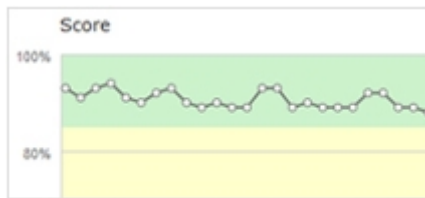

Open & extensible - write custom C# and Java code, the Platform will easily integrate and manage your objects

Fully automated DevOps = one-click deploy, integrity checking, self-healing, staging, rollback

Integrated end user performance monitoring and troubleshooting ensures an excellent user experience

Seamless application portability between cloud and on-premises, with support for hybrid scenarios

Single optimized environment to run multiple applications, with elastic scaling of applications as usage grows

"Our deployments previously were a nightmare and to deploy anything to a server would require a lot of manual steps... With OutSystems Platform you press deploy, then walk away for a brew and then come back when it's done... That in itself is brilliant and very hard to believe."

*Richard Pearson
Lead Developer, Zen Internet.*

USE CASES

The OutSystems Platform is used by hundreds of companies across 22 industries in 24 countries to:

- Rapidly deliver custom applications to support new business initiatives
- Deliver highly usable mobile applications - extending business systems to the edge of the enterprise
- Integrate legacy systems to deliver innovative business solutions
- Automate manual processes
- Replace legacy systems

RELIABLE AND SECURE

The OutSystems Cloud physical infrastructure is hosted and managed within Amazon's secure data centers and OutSystems follows all the recommended best practices for operating it. Amazon continually manages risk and undergoes recurring assessments to ensure compliance with industry standards. Amazon's data center operations have been accredited under ISO 27001, SOC 1 and SOC 2/SSAE 16/ISAE 3402, PCI Level 1, FISMA, Moderate, Sarbanes-Oxley (SOX).
